

## ABSTRACT OF THE DISCLOSURE

An image access device with a wireless transmission function is provided. The image device includes a scan unit, a wireless scan operation unit, a control unit and a first wireless transmission unit is provided. The scan unit is used for scanning a document to be scanned and outputting a scan image accordingly. The wireless scan operation unit is used for being triggered off to output a signal which initiates wireless scan function accordingly. The control unit is used for receiving the signal which initiates the wireless scan function to control the scan unit to scan the document to be scanned accordingly. The first wireless transmission unit is used for receiving the scan image and transmitting the scan image to a portable electronic device in a wireless transmission way.
